PortalView – Trust Center

Product: PortalView – Dynamic Fields for Jira Service Management

Vendor: AppRL

Support contact: support@app-rl.com

This page provides transparency about how PortalView handles data, security, and compliance requirements when used within Atlassian Cloud.

Privacy Policy

PortalView is an Atlassian Forge application designed to display Jira Service Management fields, SLA information, and Assets data directly in the customer portal.

The app does **not** collect, store, or process personal data outside of Atlassian's infrastructure.

Data access

PortalView accesses data only through Atlassian APIs at runtime, including:

- Jira issues and fields explicitly configured by administrators
- Jira Service Management request and request type information
- SLA status and timing data
- Assets objects and their attribute values (when enabled)

Data storage

The app stores **configuration data only**, such as:

- Project ID
- Request Type ID
- Selected fields
- SLA configuration

All configuration data is stored securely using **Atlassian Forge Storage**, scoped to the customer's Jira instance.

Data sharing

PortalView does **not** share, sell, or transmit data to third parties.

Security Statement

PortalView is built on the **Atlassian Forge platform** and inherits Atlassian's security controls, isolation model, and compliance standards.

Security characteristics

- Runs entirely within Atlassian Cloud infrastructure
- No external servers or APIs are used
- No outbound network calls
- No custom authentication mechanisms
- Permissions follow the principle of least privilege

All access to Jira and Jira Service Management data is governed by Atlassian's permission model and the end user's access rights.

Data Residency

PortalView follows Atlassian Forge data residency rules.

All data processed and stored by the app remains within Atlassian-controlled environments and respects the data residency location configured for the customer's Atlassian Cloud instance.

The app does not introduce additional data residency requirements.

Compliance

PortalView is designed to support compliance with applicable data protection regulations, including GDPR and LGPD, by adhering to the following principles:

- Data minimization
- Purpose limitation
- Access control based on Jira permissions
- Automatic deletion of stored configuration data upon app uninstallation

PortalView does not independently certify compliance standards such as ISO 27001 or SOC 2, but relies on Atlassian Cloud's certified infrastructure.

Support & Contact
